

APPENDIX C
HABITAT PHOTOS

Photo 1. View of wetland area 1.

Photo 2. View of wetland area 2. Note standing dead Atlantic white cedar and new recruitment in foreground.

Photo 3. Typical view of roadside bank community along Lowe's Way.

Photo 4. View of sandy borrow area along the edge of Lowe's Way (lower left hand corner).

Photo 5. View of roadside conditions along edge of large, old-field patch type.

Photo 6. View of early successional old field observed across from the Lowe's facility.

Photo 7. View of disturbed hardwood forested stand adjacent to Lowe's Way.

Photo 8. View of Lowe's Way hardwood stand along the edge of Packer Pond (to left).

Photo 9. View of conditions surrounding the Packer Pond stream. Stream is located in the dense shrub growth.

Photo 10. View of hardwood stand along Packer Road.

Figure 11. View of perennial stream as it flows beneath Packer Road.

Figure 12. Typical view of forested wetland community on the intake site.

Photo 13. View of upland forested stands observed in the low lying areas on the site.

Photo 14. View of shrub swamp that has developed in the powerline right-of-way (ROW).

Photo 15. View of mesic forested stands observed in the low lying areas on the site.

Photo 16. View of "classic" floodplain forest. Note poorly developed understory.

Photo 17. View of red maple swamp in eastern portion of site.

Photo 18. Typical view of the Quinebaug River as observed along the property margin.

Photo 19. View of stream channel observed in extreme southwestern portion of property.

Photo 20. Larger view of stream channel community in southwestern portion of the site.
